

Possibilities to use in Upskill project produced material in Finnish program production technology Maker of Plastic and Rubber Products

<https://eperusteet.opintopolku.fi/#/en>

Upskill materials for Units 9-18 are available in Tredu Moodle and all will be shared in open forum aoe.fi as well be in print form in August 2021

Finnish construction of studies	Finnish requirements	Upskill Modules
Common units	communication and interaction	1,2,3,4
	citizenship and workinglife	2,3,4,5,6
Compulsary studies	use mechanical drawings, hand tools, machine shop measuring instruments and different materials in manufacturing tasks	9
	use simple NC programs, having mastered the basics of NC techniques	10
	comply with workplace practices and occupational safety requirements relevant to manufacturing tasks.	6
	plan their work and use mechanical drawings, technical documents and wiring diagrams	1,2,3,4,5,6,7,8,9
Compulsary of the qualification	select and handle plastic types and rubber materials, chemicals and other substances used in the work	11
	check that the machines and equipment to be used are ready before launching the production process	7,8
	manufacture plastic or rubber products with one production technique manually or by a machine, or participate in a more extensive production process	after choice
	comply with workplace practices and occupational safety requirements relevant to the plastics and rubber sector	6
Optional units of the qualification	as production method needs	12,13,14,15,16,17,18

Notice: all material is easily applicable in other Finnish programs too. In shorter training also the use of UPSKILL modules is possible, like on Specialist Qualifications (plastics, chemistry and process technology) and partly in Vocational Qualification parts of Chemistry and Process technology or some other VET. Finnish system is quite flexible and we may individualize much training from other related areas when needed. The view today for Upskill material in Tredu Moodle, open for everybody licensed with Tredu account.
